

# Abundant energy Pitcairn Islands

Can solar energy replace fossil fuels on Pitcairn Island?

Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy. The goal is to replace 95% of the current diesel consumption on Pitcairn Island (75,000 liters per year) with a combination of energy saving and solar electricity through the installation of a hybrid photovoltaic solar energy system.

Are the Pitcairn Islands Green?

Pitcairn Islands, a group of five islands with a total area of 47 km<sup>2</sup> and which constitute one of the most remote archipelagos in the world, turn to safer, greener energies that best meet the needs of the population. Pitcairn's authorities have launched a renewable energy project designed to replace fossil fuels with solar energy.

Could distributed energy resources boost the deployment of renewables on islands?

Distributed energy resources - or small-scale energy resources that are usually situated near sites of electricity use, such as rooftop solar - could play an important role in boosting the deployment of renewables on islands, increasing the security, resilience and affordability of power systems while accelerating decarbonisation.

Why do small islands need electricity?

Electricity systems on small islands are frequently over-sized, with high reserve power generation capacity and ancillary services needed locally to respond to daily and seasonal fluctuations, such as changes in demand resulting from high and low tourist seasons.

In 2012 we conducted an integrated ecological assessment of the marine environment of the Pitcairn Islands, which are four of the most remote islands in the world. The islands and atolls (Ducie, Henderson, Oeno, and ...

# Abundant energy Pitcairn Islands

Among thousands of islands in the South Pacific Ocean, Pitcairn Island is probably one of the most mysterious. It is best known for the mutineers from HMS Bounty who settled down on the island. However, we do not know much about natives who inhabited the island between the 11 th and 15 th centuries. They just disappeared after living on the islands for about 400 years.

Perhaps first we should look to nations that already have abundant energy. A number of Middle Eastern countries use their generous endowments of fossil fuels to desalinate water in areas where freshwater is scarce. In Saudi Arabia, ...

The Pitcairn Islands Exclusive Economic Zone (EEZ) covers ca. 836,108 km 2 and encompasses two coral atolls (Ducie [A.] and Oeno [C.]), a raised atoll (Henderson [B.]), and one high island ...

Discovery of Pitcairn Island . Captain Philip Carteret first spotted Pitcairn Island in 1767 but couldn't land due to rough seas. He miscalculated its location, marking it miles away from its true position. Years later, Captain Cook showed some interest, but it wasn't until the Bounty mutineers arrived in 1790 that the island gained attention.

Small and remote islands, which often have abundant renewable energy resources, have the potential to become hubs of clean energy innovation. While a study performed on 36 small island economies showed ...

Perhaps first we should look to nations that already have abundant energy. A number of Middle Eastern countries use their generous endowments of fossil fuels to desalinate water in areas where freshwater is scarce. In Saudi Arabia, desalination accounts for nearly 20% of energy consumption. If done in a more sustainable way, with abundant ...
