Does Albania have a power supply security problem?

Albania is a net importer of electricity; power supply security is a challenge. Albania's domestic generation is almost entirely dependent on hydropower since the country's only thermal power plant is currently inoperable.

What is the difference between ESS and Bess?

By utilising ESS, we can ensure that we have the energy available to balance out the grid, by releasing extra energy as required that has been stored up. While ESS refers to all storage technologies such as mechanical, thermal, and chemical. BESS, on the other hand, specifically refers to systems that store energy using batteries.

Does Albania have a hydro power plant?

Albania's domestic generation is almost entirely dependent on hydropower since the country's only thermal power plant is currently inoperable. The total installed generation capacity has increased over the last few years because of new private investments in hydro power plants and more recently in small solar farms.
