

Algeria ugs energy

Why is Algeria a good country for energy exports?

Algeria's geographical position near Europe provides an advantage for energy exports, particularly to Mediterranean countries. Aligning with global sustainability goals, the Algerian Ministry of Energy and Mines has set targets for electricity generation, aiming for 40% from renewable sources by 2030.

Can Algeria become a major exporter of green hydrogen?

Additionally, Algeria is developing an energy roadmap to expand renewable energy sources in power generation and become a major exporter of green hydrogen. The country is advancing projects to boost renewable energy power generation to 15,000 megawatts (MW), nearly 30% of the total energy mix, by 2035.

How much solar energy does Algeria generate?

Instead, today Algeria generates only 411 megawatts from renewable energy sources. Nonetheless, officials hope that the new strategy described will reinvigorate attempts to bring more than 1 gigawatt of solar energy online by year-end and an additional 13 gigawatts by 2030.

How is energy used in Algeria?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Is Algeria a key natural gas supplier to Europe?

Unauthorized access or electronic forwarding, even for internal use, is prohibited. Algeria, long renowned for its abundant hydrocarbon resources, is now navigating a dual path: sustaining its role as a key natural gas supplier to Europe while rapidly accelerating its energy transition ambitions.

Does Algeria use fossil fuels to generate electricity?

Algeria's electric power sector primarily uses fossil fuel-derived sources for generation, comprising about 97% of total power capacity in Algeria (Figures 4 and 5). Algeria's total electricity capacity nearly doubled between 2011 and 2020.

In line with its energy transition strategy, Algeria launched two major projects -the 2,000 MW and Solar 1,000 MW initiatives -at the end of 2023. This strategy aims to shift from fossil fuels to renewable energy, with a goal of reaching 15 GW of production by 2035 through new renewable energy installations.

Algeria is facing a new crossroad as its political and socio-economic balance has become increasingly weakened by the consequences of the oil price collapse since 2014. Algeria is faced with stark choices, as illustrated by the interplay between its energy sector and its political & economic challenges and opportunities.
