

# Alternative solar system Spain

Does Spain have a solar energy boom?

Solar energy has experienced a boom in Spain in recent years, so much so that the government has been forced to regulate self-consumption grids. According to a Euronews report, Spain is now ranked behind the Netherlands and Germany as the country with the third highest rate of electricity coming from solar energy.

What will Spain's new solar energy regulation mean for society?

According to the Government, the measures adopted will permit society to take advantage of the potential that solar energy can offer as it will provide an alternative to citizens and it will allow the entrance of new actors into the electrical system. With the new regulation, Spain leaves behind the era of punishment for energetic self-consumption.

Why is Spain a good country to invest in solar energy?

It is also characterised by being abundant and inexhaustible, and Spain is also one of the countries that can obtain the highest yield due to its many hours of daytime sunshine. The vast majority of commercialisation companies already offer the possibility of installing solar energy in the majority of electricity supply points.

Which countries use solar energy the most?

According to a Euronews report, Spain is now ranked behind the Netherlands and Germany as the country with the third highest rate of electricity coming from solar energy. Therefore, as more and more people are turning to this type of energy, it is important to know how solar energy works.

Are cascading heat pumps a viable option for northern Spain's Atlantic climate?

Finally, equipping multifamily buildings with cascading heat pumps could be a valid option for Northern Spain's Atlantic climate. "The smart selection, combination and integration of air source and water source heat pumps can be the key to the success of this technology," said Corrales Ciganda.
