

Can solar power be installed in the Antarctic?

Temperatures below -89°C , winds over 200km/h, extreme variances in hours of sunlight, with up to 16 hours in the summer and only two during winter, pose tremendous challenges for both research teams and equipment. PV connectors from Stäubli are part of a demanding new field of application: installing solar power in the Antarctic.

What is a hybrid energy system in Antarctica?

Many national Antarctic programmes (NAPs) have adopted hybrid systems combining fossil fuels and renewable energy sources, with a preference for solar or wind depending on the specific location of the research station and previous experiences with certain technologies.

What is gamma PCU?

Gamma PCU is a Solar Power Conditioning Unit(PCU) which uses Solar energy (primary) and also the power from grid (secondary), to charge the batteries. Since usage of power from grid is secondary, grid power is only used when solar energy is not present and battery voltage level reduces to a certain level.

Can solar panels run in Arctic and Antarctica?

In fact, some studies suggest that cooler temperatures can help solar panels run more efficiently. Instead, solar panels rely on solar radiation to produce energy. So, the question isn't whether the Arctic and Antarctica are warm enough, but whether they get enough sun exposure. The fact is that we can use solar panels at the poles.

Can co-generation be used in Antarctica?

A study conducted for the Brazilian Comandante Ferraz Antarctic Station explored the potential of co-generation and a combination of different renewable energy sources, observing the greatest potential for wind energy, followed by solar PV panels (covering only 3.3% of total annual consumption if placed on walls; de Christo et al. 2016).
