I just feel that 10,000 kwh is really excessive and its obviously costing us a fortune too. Im paying about £360 per quarter.

So that's about 7kwh per day (assuming the default 30% held back). At my price that's \$.77 a day - \$.35 per day (.11 per kwh import saved by consuming battery minus \$.05 per kwh export that didn't happen because I charged the battery). So that'll take 65.23 years to pay itself off at a cost of \$10k per battery.
