

How much sunshine does Belgium get a year?

On average, 1,600 hours of sunshine per year were measured in Belgium over this period. However, the number of sunshine hours varied each year. For instance, Belgium reached its lowest level of sunshine in 2008 with less than 1,500 hours. On the other hand, the country experienced an average of 200 days of rainfall per year, during this period.

Is Belgium the sunniest country in Europe?

Belgium was, therefore, not the sunniest destination in Europe. However, the country was not the least sunny either. Fewer hours of sunshine were, for example, reported in the United Kingdom. Vitamin D, also referred to as the sun vitamin, is created from our body when exposed to the sun's UVB radiations.

Can the roofs of Brussels generate electricity?

The roofs of Brussels have real potential for generating electricity, according to the region's environment minister Celine Fremault, who launched this week. After entering your home's address, you will see a satellite image of your property with colour coding based on its exposure to sunlight.

Elia always tries to ensure that its forecasts and the corresponding measurements reflect the latest situation with regard to installed solar-PV power capacity in the Belgian control area. Installed capacities are displayed in MW-peak and are retrieved from data shared by regional authorities: Vlaams energie en klimaatagentschap (in Dutch) and ...

Calculations of sunrise and sunset in Brussels - Belgium for December 2024. Generic astronomy calculator to calculate times for sunrise, sunset, moonrise, moonset for many cities, with daylight saving time and time zones taken in account.

Without solar panels that produce the same 7000kwh, it means paying: $7000 * 25\text{ct} + \text{transport} + \text{taxes} = 7000 * 0.4\text{EUR} = \text{EUR}2800/\text{year}$. With solar panels at 30% home use that becomes: $7000 * 0.3 = 2100\text{kwh}$ free $7000 * 0.7 * 0.4\text{EUR} = \text{EUR}1960$ consumption cost $7000 * 0.7$ injected at $0.15\text{EUR} = \text{EUR}735$ injection

Increasing solar ultraviolet radiation (UVR) can raise human exposure to UVR and adversely affect the environment. Precise measurements of ground-level solar UVR and long-term data series are crucial for evaluating time trends in UVR. This study focuses on spectrally resolved data from a UVR measuring station in Dortmund, Germany (51.5° N, 7.5° E, 130 m ...
