

Cook Islands power solution

How will new energy technologies affect the Cook Islands?

In future, new energy technologies such as marine energy may offer new opportunities for the Cook Islands to generate electricity from other renewable sources. Developments in energy storage or in energy efficiency may also further reduce the Cook Islands' reliance on diesel. The Cook Islands prefers to use proven and economic energy technologies.

Can solar power save the Cook Islands?

It will construct new solar photovoltaic power plants on up to six islands of Cook Islands' southern group. The project will result in annual savings of 1.09 million liters of diesel consumption and annual reduction of 2,930 tons of carbon dioxide emission, for greater energy security and sustainability in the Cook Islands.

Does the Cook Islands have electricity?

The Cook Islands has a financially healthy electricity sector with technical and commercial challenges requiring on-going investment. With the exception of Pukapuka, Nassau and Suvarrow, the Cook Islands has some form of electricity network. Power supply on Rarotonga is the responsibility of the government-owned utility Te Aponga Uira ("TAU").

Why is energy important in the Cook Islands?

Energy is a fundamental prerequisite to the sustainable socio-economic development of a nation. As such, the Cook Islands Government considers that environmental protection, energy security and economic growth are inseparable key pillars of our country's development.

Who imports the fuel in Cook Islands?

85% of the country's fuel and all of its jet fuel is imported by Pacific Energy. The Energy Act 1998 established an Energy Division within the Ministry of Works, Energy and Physical Planning (now Infrastructure Cook Islands) responsible for energy policy and electricity inspections.

What changes will the Cook Islands make?

The changes will include management of power utilities, environmentally friendly and cost effective renewable electricity sources, and energy efficient strategies. The Cook Islands will be careful in its selection of renewable electricity options and will not entertain unproven or non-commercial technologies.

It will construct new solar photovoltaic power plants on up to six islands of Cook Islands" southern group. The project will result in annual savings of 1.09 million liters of diesel consumption and ...

As of 2022, the state of electricity consumption in the Cook Islands illustrates a balanced yet elementary mix of energy sources. Approximately half of the electricity generated comes from low-carbon sources, with solar energy contributing entirely to this segment. The other half is derived from fossil fuels, indicating that the

Cook Islands power solution

Cook Islands is equally dependent on high-emission energy.
