

During the off-peak period, the glycol chiller is operational. The glycol chilling system generates low temperature glycol that circulates through the tubes of the thermal storage coils. The circulating glycol removes heat from the water in the tanks, causing the water to freeze onto the exterior surface of the thermal storage coils. Melt-Out

In a country like South Africa, where water storage is a critical part of daily life for agricultural, residential, and commercial needs, choosing the right tank is essential. The debate often centers around steel and plastic tanks, with both options offering distinct advantages. 1. Durability and Longevity South Africa's diverse and often harsh climate places [...]
