

Denmark storEdge connection unit

Where is the StorEDGE connection unit located?

The StorEdge Connection Unit, located at the bottom of the inverter, allows simple installation and connectivity to other system components and includes a DC Safety Switch. One or two batteries (optional) - DC-coupled batteries designed to work with the SolarEdge system.

Is the StorEDGE connection unit code-compliant?

The StorEdge Connection Unit meets all requirements for a code-compliant installation of this ungrounded system. The DC section disconnects both the positive and negative conductors. Le sectionneur externe (inclus) répond aux exigences de conformité; pour l'installation de ce système ...

How do I install a StorEDGE connection unit?

Position the new StorEdge Connection Unit below the inverter and from the inside of the inverter grab the AC and DC wires extending from the unit conduits, as shown below: 3. Attach the StorEdge Connection Unit with its bracket to the wall and slightly close the screws.

How do I close the StorEDGE connection unit covers?

Close the StorEdge Connection Unit covers. 1. Turn OFF the inverter ON/OFF switch, and wait until the LCD indicates that the DC voltage is safe (<50V), or wait five minutes before continuing to the next step. **WARNING!**

How do I Turn Off the StorEDGE connection unit?

Turn OFF the StorEdge Connection Unit ON/OFF switch. 2. Turn OFF the inverter ON/OFF switch, and wait until the LCD indicates that the DC voltage is safe (<50V), or wait five minutes before continuing to the next step. **WARNING!**

How do I know if my StorEDGE connection unit is working?

Check that the AC bypass switch in the StorEdge Connection Unit is set to position 1 (see Figure 6). In normal operation, the middle and bottom LEDs indicate auxiliary voltages (13V from DC/DC, 5V and 3.3V) and should always be lit.

Appendix A: Troubleshooting StorEdge Connection Unit LEDs There are three LEDs on the lower board of the StorEdge Connection Unit, near the DIP switches: Figure 42: StorEdge Connection Unit LEDs | | | | In normal operation, the middle and bottom LEDs indicate auxiliary voltages (13V from DC/DC, 5V and 3.3V) and should always be lit.
