

Effective power solutions Madagascar

How can Madagascar improve its energy supply?

Lack of access to adequate and reliable energy has been a major impediment to Madagascar's economic and social development. A key solution to increasing access is to help Madagascar diversify its energy mix. In addition to solar and wind power, hydropower represents one of the most promising sources of power.

How can Madagascar diversify its energy mix?

One of the areas of focus is to help Madagascar diversify its energy mix towards environmental and fiscal sustainability. In addition to existing renewable energy sources such as solar and wind power, hydropower represents one of the most promising sources of power in the country.

How can ESMAP help Madagascar diversify its energy mix?

A key solution to increasing access is to help Madagascar diversify its energy mix. In addition to solar and wind power, hydropower represents one of the most promising sources of power. With ESMAP's support, the World Bank has stepped in to help the government develop priority small hydropower sites in the country.

How can The GoM lift Madagascar out of poverty?

Access to energy is a cornerstone of the GOM's efforts to lift Madagascar out of poverty. The objective is to double energy production within 5 years, increase access to electricity for at least 70 percent of the population by 2030, improve reliability of supply, and reduce energy prices.

Soil Solutions can provide valuable support for both renewable energy and mining projects, such as the one Rio Tinto can provide valuable support for both renewable energy and mining projects, such as

Utility company Jirama powers Madagascar and has a Power Purchase Agreement (PPA) with our customer, fuel supplier Jovena. The island's power comes from a mix of diesel, Heavy Fuel Oil (HFO) and hydro power stations, but summer droughts hampered hydro generation and their other plants were ageing and not as efficient as might be hoped.
