

Well managed forest resources can also become a renewable energy source. Burundi's high population density and high levels of sunshine make the country an ideal candidate for the distribution of off-grid solar energy. In 1983, Burundi's hydroelectric field was evaluated at 1700 MW, of which about 300 MW was economically exploitable.

Figure 1: Geothermal sites in Burundi (Friorickson et al. 2012) 3. ENERGY CONDITIONS IN BURUNDI Burundi's energy sector as a whole is characterized by the predominance of consumption of biomass in the form of wood and charcoal. The modern forms of energy from hydropower or renewable energies are poorly represented in the energy balance.

So, reducing energy consumption can inevitably help to reduce emissions. However, some energy consumption is essential to human wellbeing and rising living standards. Energy intensity can therefore be a useful metric to monitor. Energy intensity measures the amount of energy consumed per unit of gross domestic product.

Energy Resources International Co Ltd, established in Taiwan in 1999, initially focused on the development of lighting equipment during its early stages. However, due to its keen observation of the technology industry trends, the company commenced research in the medical field in 2004, gradually increasing its emphasis in this area over the ...
