Does leasing land for solar farms pay off?

Landowners and communities throughout North America are seeing first-hand how leasing land for solar farms and other renewable energy projects pays off. Allocating a portion of your land to lease for an energy project opens up a diversified and dependable income stream.

What is solar land leasing?

Solar land leasing involves granting the rights to develop and operate solar power installations on your land to a solar energy company or developer. Instead of purchasing the land outright, these companies lease the land from you, typically for a long-term period. How does solar land leasing work?

Should you lease land for solar?

One of the biggest pros of leasing land for solar is the financial stability offered through these long-term annual payments. This can be especially beneficial for landowners looking for a way to supplement their farm or retirement income.

How long does a solar farm lease last?

The lease requires the landowner to dedicate a portion of their land to solar for a set period, typically 20-25 years. During the operational period of the solar farm, the use of that portion of the land is limited and may require permission from the solar company.

How does a solar lease work?

The solar company conducts feasibility studies to assess the land's potential for solar power generation. If the land meets the requirements, the company will negotiate a lease agreement with the landowner, specifying the lease duration, rental rates, and other terms and conditions. What are the benefits of leasing your land for solar?

Do solar land leases affect property values?

While it's essential to consider the potential effects, studies have shown that solar land leases generally do not negatively affect property values. In fact, the additional income generated from leasing can contribute positively to a landowner's overall financial position. What are the financial obligations for landowners in solar leasing?

Land impacts from solar farms can be minimized by siting projects on previously disturbed or altered landscapes (often called brownfields), or sites where multiple compatible land uses can be maintained e.g., agricultural lands, existing buildings, parking garages, etc.
