

Green speed energy Syria

What type of energy is primarily used in Syria?

In Syria, most energy is based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society.

What happened to Syria's electricity generating capacity in 2012?

Syria's electricity generating capacity was 8.9 gigawatts in 2012, although damage to electricity generating facilities, high voltage power lines, and other infrastructure has likely reduced the country's effective capacity. Electricity distribution losses, already 17% of total generation in 2012, have likely climbed even further.

Does Syria have a power plant?

Syria's electricity infrastructure, including power plants, substations, and transmission lines, has been a frequent target of sabotage. In 2010, Syria generated almost 44 billion kilowatt-hours of electricity, 94% of which came from conventional thermal power plants. The remaining 6% came from hydroelectric power plants.

Why is energy demand increasing in Syria?

Energy demand in Syria has been increasing at a rate of roughly 7.5% per year due to the expansion of the industrial and service sectors, the spread of energy-intensive home appliances, and state policies that encouraged wasteful energy practices, such as high subsidies and low tariffs.

How does Syria use natural gas?

Most of Syria's natural gas is used by commercial and residential customers and in power generation. Syria also uses its natural gas in oil-recovery efforts, with approximately 20% of daily gross production reinjected into the country's oil fields between 2004 and 2013.

How did Syria's conflict affect the electricity system?

The conflict in Syria led to increasingly frequent blackouts across the country due to damage to the electricity system. This resulted in disruptions to all forms of economic activity and reports of electrical fires caused by problems with the electrical grid.
