

Guernsey battery tripping unit

What types of battery tripping units are available?

We supply a comprehensive range of 24V,30V,48V,50V,110V or 240VDC battery tripping units (BTUs) and associated monitoring systems to suit your site. Battery tripping units are used in industrial areas where the application of a DC supply in substations and switch rooms is required for the protection and tripping of circuit breakers.

Are our Battery tripping units built in house?

All of our battery tripping units are built in house with both off the shelf models and bespoke units, each to suit your requirements. Our Battery tripping units have a standard range, we build 30v,50v,110v and 240v units, Bespoke BTU's can be designed and built to suit your requirements.

How many volts does a battery tripping unit have?

Our Battery tripping units have a standard range, we build 30v,50v,110v and 240v units, Bespoke BTU's can be designed and built to suit your requirements. Our basic model starts at 5ah with voltmeter and supply light with test button right the way through to complex units with 30ah and as many weird and wonderful gadgets you require.

What is a battery tripping unit (BTU)?

Battery Tripping Units (BTUs) are primarily used in industrial systems to protect against overcurrent conditions. Providing a high current load for a short amount of time, battery banks will open or trip breakers in the event of a fault being detected in the system. In all safety systems it's critical to select the correct battery charger.

What is a DST tripping battery?

The Dartpoint DST range of tripping battery units provide a DC supply in electrical substations and switch rooms for the tripping and closing of circuit breakers. The units are highly reliable and utilise maintenance-free nickel cadmium batteries which give high discharge currents and long life.

What is a CRB tripping battery?

The CRB range of tripping battery units provides a dc supply in electrical substations and switch rooms for the tripping and closing of circuit breakers. They also find applications in order standby situations where an occasional high current load needs to be supplied for a relatively short time.

All of our battery tripping units are built in house with both off the shelf models and bespoke units, each to suit your requirements. Our Battery tripping units have a standard range, we build 30v, 50v, 110v and 240v units, Bespoke BTU's can be designed and built to suit your requirements. If a fault is detected in the supply, the battery tripping unit is energised and trips the system to cut the supply to before failure occurs. Our robust range of high performance and maintenance free nickel cadmium BTUs come complete with a 12-month warranty. We hold standard units in stock for immediate dispatch and also offer custom made ...

Thermal-magnetic tripping units // The thermomagnetic trip unit consists of two parts: The thermal trip unit - Made up by a bimetal thermal device which actuates the opening of a circuit breaker with a delay depending on the overcurrent value. This trip unit is intended for the protection against overloads.. The magnetic trip unit - Made up by an electromagnetic device, ...

Battery Tripping Units (B.T.U.) for use in electrical substations to supply the impulse tripping and closing currents associated with high tension switchgear breakers whilst in most cases supplying any permanent standing load requirements of the switchgear panels.

The Chargetec Ranges Economy - C200 range The C200 range of battery trip units provide the basic function of providing a back up battery trip supply with limited standing load capabilities (20W). They come with a voltmeter, an LED for mains on and an output MCB. Intermediate - C300 range The C300 range of battery trip units provide a greater ...

Battery terminals voltages are not isolated from the control and trip power. The CTDB-6 unit will recharge itself if terminals #6 and #7 remain shorted! Follow the discharge procedure prior to any service or maintenance of the CTDB-6 unit or trip system. CTDB-6 Panel Layout Operation Nominal ac volts is applied across terminals #8 and #10. This

4. Compliance with Standards. Battery tripping units help facilities comply with various electrical safety standards and regulations, such as: IEC and IEEE Standards: Compliance with these international standards often requires reliable mechanisms for fault isolation and power disconnection, which BTUs facilitate.; Local Electrical Codes: Adhering to ...
