Norway has installed the world's northernmost ground solar panels in its Svalbard archipelago, a region plunged in round-the-clock darkness all winter.

Could a new solar project help remote Arctic communities transition to green energy?

Norway has installed the world's northernmost ground solar panels in its Svalbard archipelago, a region plunged in round-the-clock darkness all winter. The pilot project could help remote Arctic communities transition to green energy.

How to install solar panels?

The basic system is to start with the installation of a rack or platform. If the panels are roof-mounted, a roof racking system is first installed. A ground platform is needed if the panels are ground-mounted, and installing the solar panels is not difficult. What is more difficult is wiring them.

Why do solar panels work in Isfjord Radio?

The solar panels also benefit from the "albedo" effect, the reflective power of snow and ice, as well as low temperatures that improve their efficiency. On the flipside, the region is plunged into total darkness from early October until mid-February, which makes it impossible for Isfjord Radio to completely give up fossil fuels.

How do Trethewey & Warda install solar panels?

With the mounting system and electrical components in place, Trethewey and Warda install the solar panels. Each panel is bulky and heavy, so lifting them onto the roof is often a two-person job. Once each panel is in place, Trethewey and Warda connect it to the microinverter and fasten everything to the rails with clips and clamps.
