The SH-RS inverters have a wide MPPT voltage operating range from 40V to 560V, while the more powerful 8 & 10KW units offer an impressive 4 MPPTs, enabling greater flexibility when designing solar arrays. The inverters are also equipped with advanced diagnostic tools, such as an IV curve scan, to identify faults or degradation issues in solar panels.

This type of inverter also lacks the ability to provide backup power during grid disruptions. Hybrid inverters, on the other hand, integrate solar and battery inverters. It offers a comprehensive solution for power generation, storage, ...

A hybrid solar inverter integrates the functions of a traditional solar inverter and a battery inverter into a single unit. It not only converts direct current (DC) from solar panels into alternating current (AC) for residential or commercial use but also has the capability to store excess energy in batteries for later use.

Typically a hybrid system can be programmed to automatically swing the house over to battery power and/or generator backup should a mains electricity failure be identified. Reduce electricity consumption from the grid by enabling the house to source power from the solar array and/or battery bank during the daylight hours.
