

Indonesia is one of the largest carbon emitting countries in the world, especially from the land conversion sector. According to European Commission data, Indonesia's greenhouse gas emissions volume in 2022 will reach 1.24 ...

Three-quarters of UK institutions reduced their carbon emissions last year as the total volume of CO₂ produced fell by the equivalent of flying around the world over 3,500 times. Figures from ...

The partnership marks BCA's active participation in reducing greenhouse gas emissions tied to its logistics operations. SAF, considered essential in aviation sector decarbonization, can reduce ...

To meet these targets, Indonesia must reduce emissions to approximately 459 million tons of CO₂e, which requires integrated and coordinated action across all major sectors. Minister ...

The Institute for Essential Services Reform (IESR) has conducted a study on total individual greenhouse gas (GHG) emissions, or carbon footprints, in urban, semi-urban, and rural areas across Java Island to identify patterns and influencing ...

Jakarta, The Gulf Observer: Indonesia is in the final stages of preparing its Second Nationally Determined Contribution (NDC), a comprehensive roadmap aimed at reducing greenhouse ...

Indonesia's FOLU Net Sink 2030 is an ambitious national program that aims to increase the capacity of forests and other land use to absorb and store carbon. It plays an important role in ...

A new landmark study on individual carbon footprints from the IESR points to a wide disparity between urban and dwellers, suggesting that administrations can create more localized ...

Jakarta, the capital city, has gained a reputation as one of the most polluted cities globally, with air pollution spiking during the dry season due to a combination of meteorological conditions and ...

Jakarta - The carbon footprint of individuals on Java Island reveals a worrying fact: the transport and food sectors are the primary sources of greenhouse gas (GHG) emissions, particularly in ...

Indonesia, like many countries around the world, has embedded the low-carbon para-digm into its development plan by reducing energy and carbon intensity. To design the appropriate policy, ...

While butane offers advantages in terms of reduced emissions during combustion, its overall environmental impact throughout the supply chain must be carefully evaluated. This includes addressing emissions from

Jakarta reduced carbon emissions

extraction, ...

Jakarta, July 14, 2025 - The Prabowo-Gibran government is being urged to develop a low-emission and sustainable mobility strategy to realize its goal of becoming a developed nation ...

He noted that the updated climate action plan aims to be more comprehensive and fully aligned with Indonesia's ambition to lead global carbon emission reduction efforts. The plan responds ...

While ten years have passed since the Paris Agreement, global efforts to reduce emissions are still lacking, with recent UN projections indicating that the world is on course for a temperature rise of 3.1°C by 2100 - well ...

The developed framework has been successfully validated by toll road experts in Indonesia. Finally, in their conclusion, the experts emphasized the use of 23 critical green components to ...

Abstract Tidal energy is one of the renewable energy sources that could be utilised to reduce Indonesia's carbon emissions produced in the energy sector. Many straits have been studied for tidal current energy; however, several ...

The findings were stark. Residents of major urban centers like South Jakarta, Bandung, and Yogyakarta emitted approximately 3.4 tonnes of carbon annually - a staggering 45% higher ...

Moreover, he noted that Indonesia has successfully cut emissions by 608 million metric tons of carbon dioxide equivalent, or 36.7 percent compared to total emissions under a business-as-usual scenario.

Abstract: Jakarta faces severe air pollution, largely driven by emissions from private vehicles. As the city continues to urbanize and motorization increases, the integration of public transport ...

The Indonesian government has set the target of reducing greenhouse gas emissions by 29 percent in 2030 and achieving zero carbon emission by 2060. Apart from its resources and providing fiscal incentives, ...
