Bioport, being a producer of alternative energy solutions, is at the forefront of innovation and sustainability. The organization implemented a multidisciplinary continuous improvement project to optimize operational efficiency with a special focus on quality, performance, and availability improvement. Excellent results were obtained in terms of OEE and team productivity.

To develop a Continuous Improvement Culture, organizations must move from unstructured firefighting to an improvement-driven approach. This requires a behavioral change at all organizational levels, starting with data, making the problems visual, and following structured problem-solving technics.

This is what led this food producer to transform their operations to become more sustainable by improving energy efficiency. After the implementation of this transformation programme, it was possible to reduce energy consumption by 15% (kWh/year) which translated into a 13% reduction of the annual energy cost.
