Traditional solar panels, batteries, and your inverter are going to cost way more in Ecuador, just like all imported high tech equipment. My suggestion is to use propane for cooking and hot water (if you need hot water), passive solar (skylights). That leaves you needing only enough power for lighting at night and charging cell phones, etc...

a combination of these harmonic suppression techniques can be used depending on the specific requirements of the inverter application. By effectively reducing harmonics, the performance and reliability of the power system can be enhanced, ensuring the smooth operation of electrical equipment and improving the overall power quality.
