

The diffusion path of lithium ions on the surface of the carbon active material and the porous core structure smoothly induces an insertion-deinsertion reaction of lithium ions in activated carbon ...

Figure 2 Summary and comparison of lithium extraction performance of various technical routes in existing work In this study, the authors first systematically summarized the current research ...

The equivalent force-strain curve of the jellyroll has been established, with simulation results closely matching experimental data, which provide a modeling criterion for future ...

Lithium element data
