This Smart Micro inverter operates in sync and in phase with the utility grid, prioritizing the inverter's power for household ...

If your system is at capacity, or getting too many shades, another option is to get panels with a micro grid tie inverter for each of them, that you could just connect to your off-grid AC circuitry. That way shades on one panel does not reduce down your whole system production, you don't have to invest on thicker wire for panels.

I would prefer a bundled system grid tied, micro inverters, with battery back up. Working through pge calculations they recommend a 7.6 kW (DC) with 20 panels. They also recommend battery backup size of 13.5kWh (battery capacity) and 5kW (max continuous) I need to do this as my electric pge is out of control expensive and even with their ...
