

Fiji has taken a major step toward sustainable energy by signing a Country Partnership Framework (CPF) with the International Solar Alliance (ISA). The agreement, formalised at [...]

A microgrid that utilises renewable energy sources is viewed as the most appropriate and cost-effective method to supply electricity. As technology has progressed, energy storage systems ...

For reliable and cost-effective microgrid operation, the aim is to choose the optimum size of a wind turbine, PV panel, and battery. In this, LCOE, LPSP, and EI are framed as three objective ...

I am following the MathWorks example about Micro-grid Islanded Operation Droop Control. I noticed two discrepancies in the example model and model in the referenced IEEE paper: H. ...

We would like to invite you to a presentation hosted by the IEEE PES Task Force on Resilient and Secure Large-Scale Energy Internet Systems (RSEI). Title: "Reinforcement Learning for ...

In a hydrogen microgrid, such attacks could manipulate critical variables, including electricity prices or hydrogen storage levels, to destabilize operations and cause economic inefficiencies.

In general, the model is an advanced microgrid configuration that supports convenient operation of both DC and AC loads and sources, utilizes the available renewable energy to the fullest extent possible, and increases the system ...

In view of the negative impact on the stable operation of the system caused by the disorderly charging of large-scale electric vehicles connected to the microgrid, an optimization method for ...
