New research finds liquid air energy storage could be the lowest-cost option for ensuring a continuous power supply on a future grid dominated by carbon-free but intermittent sources of electricity.

Hydrogen Storage NREL has unique capabilities to conduct megawatt-scale research on hydrogen generation, energy storage, power production, and distribution. Researchers focus on hydrogen storage material ...

Energy storage has become a cornerstone of the future energy landscape, playing a crucial role in grid stability by balancing the intermittency of renewables which are rapidly expanding across ...

Fe³⁺ and C effectively replace the lactic sites of Zn²⁺. The findings demonstrate that Fe/C doping significantly increased ZnO storage activity, which may be related to generating new ...
