This document introduces a novel concept involving an Omni-Directional Guided Vane (ODGV) encompassing a vertical axis wind turbine (VAWT) with the goal of improving its overall performance.

wind turbine, proposed a vertical-axis wind turbine with an opposite rotating top and bottom wind wheel to make efficient use of low-flow wind speeds. Zha G. et al. [12] in their patent on a "Vertical axis wind power plant" created a wind power plant with single-rotor outer guide surfaces and inner rotating blades to supply power

Omni directional wind turbine had a three - bladed rotor mounted on the top and the top structure is connected to the pole with help of a thrust bearing. As the wind blows the wind vanes helps in aligning the wind turbine along the direction of wind flow. The truncated hollow cone like structure is used for guiding wind towards the wind turbine ...

Unlike traditional turbines that only work with horizontal winds, its particular geometry enables it to rotate over a single axis always in the same sense by using winds coming from any direction, allowing a more continuous operation ...

Unlike traditional turbines that only work with horizontal winds, its particular geometry enables it to rotate over a single axis always in the same sense by using winds coming from any direction, allowing a more continuous operation and maximizing the energy generation. The O-Wind will allow people living in 1.3bn apartments worldwide, to ...

An omnidirectional augmented wind turbine popularly called Zephyr vertical axis wind turbine has also been

A novel shrouded wind-solar hybrid renewable energy and rain water harvester with an omni-directional-guide-vane (ODGV) for urban high-rise application is introduced. The ODGV surrounds the vertical axis wind turbine (VAWT) and enhances the VAWT performance by increasing the on-coming wind speed and guiding it to an optimum flow angle before it ...

This is a omni directional wind turbine designed to be installed outdoors on the rails of your deck or just stick it in a potted plant. This design will catch wind from all directions and the turbine does not have to face the wind.

A truly-omnidirectional, single-axis wind turbine especially suitable for apartment buildings facing chaotic winds in urban environments. (pat.pend.) Cardboard prototype being tested in a real scenario at the Morecambe Bay, UK. This video summarizes the entry to the contest, including its origin, current state, market and future plans. ...

It is an omnidirectional wind turbine technology to generate power by wind from the direction of 360°;. In the GPT, all turbine rotating components are covered in the enclosures and not exposed to surroundings. The turbine drives the shaft at the enclosure center. The shaft is connected to the generator located

An omni-directional, vertical discharge wind turbine assembly (1) including a shroud that includes a diffuser (9) and the structure surrounding and defining the collection chamber (12) that captures wind in any direction and directs it to flow vertically via stacked curved blades of toroidal form (10a-10e). The blades (10a-10e) are secured by vertical walls (6.1-6. 3).

An omni-directional, vertical-axis wind turbine which includes a rotor/stator combination which maximizes energy production by increasing wind velocity and pressure plus eliminating back pressure. The stator section includes a plurality of vortical blades secured between upper and lower conical sails. The blades have a radius fundamentally equal to that of the rotor and a ...

He came across an opportunity to apply for the James Dyson Award for engineering design. He revisited his old design, returned to the drawing board to transform it into an omnidirectional wind turbine, and teamed up with his classmate, Yaseen Noorani, for engineering support. They approached the engineering department to test the new idea.
