

Our solar system contains

All the planets, asteroids, comets, and other objects in our solar system orbit around it. The Sun's immense gravity is what holds the solar system together, causing everything to revolve around ...

Here's what you'll learn when you read this story: Meteorites found in the Sahara Desert might be pieces of Mercury that broke off as the result of a collision when the Solar System was still ...

A controversial new study claims that a "hostile" alien spacecraft could attempt to attack Earth in November. Scientists say a rare interstellar object, only the third ever detected, is racing ...

Our solar system is a shooting gallery While it would certainly be a rare event to see an impact on Saturn, it's not unprecedented. In fact, our solar system contains much more than just the ...

Since asteroids formed at the same time as other objects in our solar system, these space rocks can give scientists lots of information about the history of planets and the sun. ...

In our solar system, the closest planet to the Sun is Mercury. Our Sun's closest star neighbor is called Proxima Centauri. It is approximately 4 light-years away. What does the Sun ...

Our solar system currently contains eight known planets. They are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. At one time Pluto was considered a planet until it was downgraded to a dwarf planet. In ...

A dozen original songs on topics from our solar system to the most energetic events at the far reaches of the universe. Sky & Telescope called it "An astronomy class set to music" and Astronomy Today said "Lively, entertaining, ...

Solar system - Planets, Moons, Orbits: The eight planets can be divided into two distinct categories on the basis of their densities (mass per unit volume). The four inner, or terrestrial, planets--Mercury, Venus, Earth, and Mars--have rocky ...

In our own solar system, the very first solid material to condense near Earth's present location can be found locked within ancient meteorites. Using these primordial rocks, astronomers can...

The Solar System includes eight planets, multiple asteroids, comets, meteoroids, dwarf planets like Pluto, and various moons. Located in one of the outer spiral arms of the Milky Way galaxy, ...
