

Palestine hsi energy

Is the energy sector in Palestine a unique situation?

The energy sector, specifically electricity in the State of Palestine, is in a unique situation.

How much energy does Palestine need?

Palestinian energy demand increased rapidly, increasing by 6.4% annually between 1999 and 2005. Future consumption of electricity is expected to reach 8,400 GWh by 2020 on the expectation that consumption will increase by 6% annually.

Can Palestinians achieve 10 percent of electricity production from renewable sources?

The Palestinian Energy Authority issued a renewable energy strategy in 2012 that aims to gradually achieve 10 percent of electricity production from renewable sources by the end of 2020. According to the strategy, this goal can be achieved if certain prerequisites are attained.

Why is energy demand so high in the Palestinian territories?

Energy demand in the Palestinian territories is growing rapidly while the availability of natural resources is scarce, making the power sector almost entirely dependent on energy imports from neighboring countries.

Does Palestine have a potential for solar power?

The Palestinian territory has a high potential for solar power generation, as it receives around 3,000 hours of sunshine per year. As a result, the Palestinian Authority is looking to attract investments in the renewable energy sector. Inauguration of the solar power plant in a school in Beit Hanina, Jerusalem.

What is the energy problem in Palestine?

The energy problem in Palestine is one of many issues that affect the social and economic conditions of the Palestinian people. The fact that most of the energy is imported at relatively high prices places more financial burdens on poor and marginalized people.
