

The increase in power generation facilities from nonprogrammable renewable sources is posing several challenges for the management of electrical systems, due to phenomena such as ...

Under isothermal condition for one mole of ideal gas, what is the ratio of work done under reversible to irreversible process? The gas is initially held at 20 atm and undergoes expansion ...

The development of polypropylene-based hydrogen storage systems has its roots in the broader research on polymer-based gas barrier materials. Over the past few decades, scientists and ...

GE Vernova's Gas Power business has begun the execution of the fuel conversion project for Saudi Electricity Company's (SEC's) Power Plant 10 (PP10), in Riyadh, marking a vital step in KSA's carbon emissions reduction.

Expeditious power system (PS) restoration is always the top priority after blackouts, which necessitates full-process restoration instead of considering different phases separately. More ...

Producers Midstream II plans to convert its Palo Duro Pipeline into an interstate system to move Permian gas to Midcontinent markets, targeting demand from data centers, petrochemicals, ...

Remote control lawn mowers are equipped with components or modules that require power to maintain the connectivity to communicate with users. Generally speaking, remote control mowers offer a much energy-efficient alternative ...

New statutory requirements for fixed inert gas systems will enter into force on 1 January, 2016, as a result of changes to SOLAS, the Fire Safety Systems (FSS) Code and the International Bulk Chemical (IBC) Code. The ...

GSE Solutions has developed a hydrogen fuel cell generation and storage plant simulation model to support NuScale Power's hydrogen simulator project. The initiative is part of the broader ...

This system enables rapid, reversible shape-reprogramming among numerous complex and smooth 3D configurations, offering notable advantages in terms of speed, power consumption, and scalability without the need for the pumps ...

This work is limited to investigating the power-to-gas process at the prosumer level. The electricity surplus of rooftop PVs is used to produce synthetic natural gas, fed into the gas grid after ...

## Reversible power to gas systems

The current unidirectional gas grids should be upgraded with compressors at pressure reduction groups to turn them bidirectional, allowing synthetic natural gas storage in the existing large ...
