It makes sense to simultaneously manufacture clean fuels like hydrogen when there is an excess of energy [6]. Hydrogen is a valuable energy carrier and efficient storage medium [7, 8]. The energy storage method of using wind energy or PV power to electrolyze water to produce hydrogen and then using hydrogen fuel cells to generate electricity has been well ...

Renewable heat. Renewables also have an important role in providing heat for buildings and industrial processes. To achieve decarbonisation and energy saving objectives, many countries are encouraging individual homes and buildings to shift from fossil fuel heating systems such as gas- or oil-fired boilers to systems like heat pumps which are much more efficient and can be ...
