Using a Maximum Power Point Tracking (MPPT) solar charge controller with a wind turbine can be a highly efficient way to charge batteries or power other loads in off-grid or hybrid energy systems. MPPT technology is typically associated with solar panels, but it can also be applied to wind turbines to optimize power conversion and battery charging.

To put it simply, they convert a higher voltage DC output from solar panels (and a few wind generators) down to the lower voltage needed to charge batteries. Compared to conventional PWM controller, MPPT technology increases the charge efficiency up to 20% and potentially decrease the power of solar array needed. Data Sheet
