

Why is Syria's energy sector in turmoil?

Syria's energy sector is in turmoil because of the ongoing civil conflict that began in the spring of 2011, with oil and natural gas production declining dramatically since then. Syria's energy sector has encountered a number of challenges as a result of conflict and subsequent sanctions imposed by the United States and the European Union.

What happened to Syria's oil & natural gas industry?

Syria, previously the eastern Mediterranean's leading oil and natural gas producer, has seen its production fall to a fraction of pre-conflict levels. Syria is no longer able to export oil, and as a result, government revenues from the energy sector have fallen significantly.

How much oil does Syria produce a day?

Before the war, Syria's oil production averaged over 400,000 barrels per day (bpd) between 2008 and 2010. By May 2015, this had dropped to fewer than 25,000 bpd, according to the US Energy Information Administration but by 2023 production averaged approximately 91,000 bpd.

Does Syria have electricity?

Syria also had separate entities for the generation and distribution of electricity. Syria's oil sector has been in a state of disarray since 2011. Production and exports of crude oil have fallen to nearly zero, and the country is facing supply shortages of refined products.

What type of energy is primarily used in Syria?

In Syria, most energy is based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society.

What happened to Syria's electricity generating capacity in 2012?

Syria's electricity generating capacity was 8.9 gigawatts in 2012, although damage to electricity generating facilities, high voltage power lines, and other infrastructure has likely reduced the country's effective capacity. Electricity distribution losses, already 17% of total generation in 2012, have likely climbed even further.

THE Syrian war often seems like a big confusing mess but one factor that is not often mentioned could be the key to unlocking the conflict. Deals of the Week In the know quiz

Energy in Syria is mostly based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. There is high reliance on fossil fuels for energy in Syria, and electricity demand is projected to increase by 2030, especially for industry activity such as automation. However, conflict in Syria has caused electricity generation to decrease by nearly 40% in recent years due to plant destruction and fuel shortages. Electricity
