What is the Global OTEC Dominique project?

The Global OTEC Dominique project,off the coast of S&#227;o Tom&#233; and Pr&#237;ncipe,has the potential to alter the energy demands of island nations significantly. The Dominique project by Global OTEC aims to bring sustainable energy to island nations.

How much energy does OTEC use?

This is important, as previous OTEC projects have used a great deal of the energy they generate to run the pumps that bring the cold water to the surface. In 1981, the Tokyo Electric Power Company built an OTEC plant in Nauru that generated around 120 kW of energy, but used around 90 kW of that to run the plant.

How does Dominique tackle OTEC's high capital expenditure?

Dominique tackles one of the big issues with OTEC -- high capital expenditure -- by siting the system on a floating barge,scaling down the platform size,using modular construction,and employing a steel hull for space efficiency.

generation provides a consistent, regular supply of energy, ideal for coupling with our industrial energy storage machines to supply 24 hour base load energy, a service which is difficult to provide with conventional power-centric batteries.

The platform, named Dominique, was presented at the International Vienna Energy and Climate Forum and will be installed at a pilot project in S&#227;o Tom&#233; and Pr&#237;ncipe. Global OTEC will now conduct a geotechnical (seabed) survey and then finalise design of the project-specific system.

The energy storage technology will be combined with generation from tidal power to produce continuous supply of green hydrogen at the facility on the Orkney Island of Eday, about 24km north of the Scottish mainland in the UK. This article requires Premium Subscription Basic (FREE) Subscription.
