Battery performance prediction is crucial in many applications. A good prediction mechanism of the battery performance has many advantages. For example, it increases the battery lifetime by preventing over (dis)charging the battery, it allows utilizing the entire capacity of the battery, and it offers an access to the user to know the amount of energy in the battery pack.

This drives the need to validate structural battery pack design, both in terms of life expectancy against design targets as well as crash test compliance and survivability. Interface Solution Interface's solution includes 1100 Ultra-Precision LowProfile Load Cells in-line with hydraulic or electromechanical actuators in customer's test stand.
