

The Ultraviolet Magic Window shows us our own star, the Sun, as it rotates and seethes with activity. We can clearly see sunspots, flares, and other solar events in this wavelength. The Solar and Heliospheric Observatory ...

Comet 3I/ATLAS was first identified by the Asteroid Terrestrial-impact Last Alert System (ATLAS), a global network of four robotic telescopes located in Hawaii, Chile, and South Africa. ATLAS systematically surveys nearly the entire night ...

Data from the James Webb Space Telescope on exoplanet K2-18b has revealed the "strongest hints yet of biological activity outside the solar system," according to a University of Cambridge ...

The twin STEREO spacecraft provided the first-ever 3D views of the Sun's surface and coronal mass ejections. The STEREO mission was the first to be able to image solar storms all the way from the Sun to Earth orbit. In 2012, ...

ALMA, acting like a super-sensitive radio telescope, confirmed the presence of these crucial minerals in gaseous and crystalline forms, suggesting that the solidification process is just ...

An astrophotographer has captured an extremely rare and "difficult" photo of a solar flare exploding from the sun at the exact moment the International Space Station passed directly in ...

Data from the James Webb Space Telescope on exoplanet K2-18b has revealed the "strongest hints yet of biological activity outside the solar system," according to a University of Cambridge study ...

Astronomers have made a groundbreaking discovery using some of the world's most advanced radio telescopes. Researchers, led by Fengqiu Adam Dong, a Jansky Fellow at the NSF Green Bank Observatory (NSF GBO), have ...

Many people are fascinated by the cosmos and the mysteries it holds. A common question arises regarding whether planets emit radio waves. The answer is yes; planets in our solar system do emit radio waves due to ...

Subscribe Join 57 other subscribers ABOUT ASRAS Our mission is to share our passion for, and joy in, astronomy by providing fellowship, education and extraordinary observational experiences to members of our organization ...

Australia is a member of the international organisation established to build and operate the world's most powerful radio astronomy facility, the SKA Observatory (SKAO). The SKA Observatory are building and
