How much do EV batteries cost?

Fact is now batteries are so cheap, under \$70/kWh for LFP packs 3 yrs ago from CATL for Tesla, a well designed EV costs no more than an ICE. And in 2 yrs they'll be under \$50/kWh or even less as they are getting up to \$35/kWh subsidy for building them in the US.

What happened to EV battery prices in 2022?

After dropping 14%, they are down to \$139/kWh. The steep price drop and record low average price come on the heels of price increases in 2022 that had brought battery prices back to 2020 levels. The world changes fast. Just looking at EV lithium-ion batteries, the average price for packs was down to \$128/kWh, and for cells it was down to \$89/kWh.

Are EV batteries overpriced?

Yes, in a nutshell it appears that stationary batteries are overpriced by comparison. And some EV batteries may be internally or externally subsidized by enabling additional ICE sales. I just saw a used LEAF advertised at a Nissan dealer, \$45,000 CAD with 1 KM on the odometer.

48v/51v systems at \$170 is pretty affordable. Cycling 20% to 80% most of the time will usually get 10k cycles, and so that makes it a 1.7c/kWh premium over charging cost. Over sizing affordable compared to \$500 price of just a couple of years ago.

"Our researchers forecast that average battery prices could fall towards \$80/kWh by 2026, amounting to a drop of almost 50% from 2023, a level at which battery electric vehicles would achieve ...
