Cesium, chemical element of Group 1 (also called Group Ia) of the periodic table, the alkali metal group, and the first element to be discovered spectroscopically (1860), by German scientists Robert Bunsen and Gustav ...

The reactivity of alkali metals increases from the top to the bottom of the group, so lithium (Li) is the least reactive alkali metal and francium (Fr) is the most reactive. Because alkali metals are so reactive, they are found in nature ...

Alkaline Earth Metals are a set of six chemical elements in the periodic table's group 2. Beryllium (Be), magnesium (Mg), calcium (Ca), strontium (Sr), barium (Ba), and radium (Ra) are the elements involved (Ra). Alkaline ...

Summary Group I (alkali metals and hydrogen) elements all have one electron in their outer shell. This electron is in a s orbital. The Group I metals are all very reactive with water. Review What group are the alkali metals and hydrogen ...

Alkali metals are found in group 1 of the periodic table and have a +1 charge, while alkaline earth metals are found in group 2 and have a +2 charge. Alkali metals are highly ...

However, high blood levels usually point to liver or bone problems. Read on to understand the symptoms and causes of high alkaline phosphatase and how to reduce it naturally. What Does High Alkaline Phosphatase Mean? ...

The concept of electron configuration directly influences the reactive behavior observed in alkali metals. Specifically, the alkali metals valence electrons, residing in the outermost shell, ...

metal, any of a class of substances characterized by high electrical and thermal conductivity as well as by malleability, ductility, and high reflectivity of light. Approximately three-quarters of all known chemical elements are metals. ...

The periodic table is divided into 4 blocks, i.e., s-block, p-block, d-block, and f-block. Out of all these blocks, the elements of the s-block form the foundation of chemistry. The s-block elements are divided into two categories, ...

Sodium is the most common alkali metal and the sixth most abundant element on Earth, comprising 2.8 percent of Earth's crust. It occurs abundantly in nature in compounds, especially common salt --sodium ...
