

# Why does wind exist

Tropical cyclone, an intense circular storm that originates over warm tropical oceans and is characterized by low atmospheric pressure, high winds, and heavy rain. Also called typhoons and hurricanes, cyclones strike regions ...

Ergo, the argument goes, taxpayers must subsidize wind and solar to meet electric demand. But if what they say is true, why do wind and solar need subsidies? There will be a market incentive to build wind and solar anyway. ...

Wind is the movement of air caused by pressure differences in the Earth's atmosphere. It plays a crucial role in shaping climate and weather patterns across the globe, influencing temperature, precipitation, and even ...

Coriolis force, in classical mechanics, an inertial force described by the 19th-century French engineer-mathematician Gustave-Gaspard Coriolis in 1835. An inertial force must be included in the equations of Newtonian laws of ...

Ever wondered why golf balls have those dimples? They're not just for looks--they're a game-changing design that revolutionized golf! From reducing drag by up to 50% to boosting lift and ...

If you're ever near the North or South Pole, you may be in for a very special treat. Frequently there are beautiful light shows in the sky. These lights are called auroras. If you're near the North Pole, it is called an aurora borealis ...

Did you know that wind energy is generated because of the sun? As the earth rotates and absorbs the sun's heat through the atmosphere, wind is created. We have come a long way as a society from the first gust of wind. ...
